

Wired for Success

Skills Centers' focus on professional and technical training and employability provides students the background to be successful no matter where their eventual career path takes them.

The partnership between Tri-Tech Skills Center and Kennewick's LU 112-NECA Electrical Apprenticeship program provides students with a path into apprenticeship... A wide range of Skills Center programs have contributed to that record – the Automotive, Auto Body, Computer Systems, Construction, Diesel, Law Enforcement and Welding, among others.

One such apprentice is Amy Meeks — now a 2nd year journeyman — who completed the Diesel program in 2008. Amy says Tri-Tech taught her both how to use power tools and a good work ethic. Her favorite thing about her career is that along with great pay, there's no sitting around and every day is different!
